

WHICH ANIMALS LIVE IN THE CLEAN RIVER?

! Set a trap for trash

Every day, a heap of trash gets carried down our rivers into the ocean, including a lot of plastic. Researchers from the organization CLEAR RIVERS have developed traps that float on rivers and use a net to collect trash — but not animals, which of course are unharmed. Traps like these are already being used in Indonesia, Belgium and the Netherlands. In one month, each trap collects about one cubic meter of trash — a one meter cube that can no longer harm people, animals or the environment.
