

# WHAT DO YOU USE ELECTRICITY FOR?

## ! Green electricity from the box

At your home, you get electricity right from the outlet. If you need light, you simply switch it on. If the battery in your camera is empty, you charge it. But in many countries, there are still areas with no power lines, such as in India. When it gets dark, there is simply no more light. This is where the Nunam Box can help: It is made up of individual rechargeable batteries that together provide a lot of electricity. The Box can be connected to lights and charge mobile phones, even if there is no power outlet. When the batteries are empty, a solar module recharges them with sunlight. And the best part: The batteries in the Box are used batteries from old laptops that would otherwise end up in hazardous waste. They are given a second life in this charger.
